Tracker fuse box on

Rosen Nissan helped make these videos. The video above shows how to replace blown fuses in the interior fuse box of your Chevrolet Tracker in addition to the fuse panel diagram location. Electrical components such as your map light, radio, heated seats, high beams, power windows all have fuses and if they suddenly stop working, chances are you have a fuse that has blown out. If your Tracker is experiencing electrical problems, you should always check the fuses first, because they are relatively easy to check and cheap to change. Some Chevrolets have multiple interior fuse boxes including in the trunk - the video above will show you where the interior fuse box of your Tracker is located. If your Tracker has many options like a sunroof, navigation, heated seats, etc, the more fuses it has. Some components may have multiple fuses, so make sure you check all of the fuses that are linked to the component in question. If you need to replace a blown fuse in your Tracker, make sure you replace it with one that has the same amperage as the blown fuse. If checking and replacing the fuse for the component in question doesn't work, we recommend seeking assistance from a trusted professional mechanic. They should be able to figure out if the component needs to be replaced or if there is a short or some other problem with your Tracker. Hans Angermeier has produced over , videos showing drivers how to fix things on their cars. He has broad expertise on basic repair procedures covering the majority of cars on the road. Many cars will burn or leak a little bit of oil. Over time, this adds up and you might need to add some - learn how to here! If your transmission is running low on fluid, be sure to add some - find out how to do this here! Cars burn, leak and otherwise dispense of their oil. Check your level frequently and top up when necessary. Car companies often use the same engines in different cars. They also slightly alter the styling and sell the same car by two different names amongst other tricks to help offset development costs. Our system selects the most applicable video for your car based, in part, on these characteristics. The video displayed may not look exactly like your car, but may be relevant enough for you to get a good idea how to do it. Getting Started - Prepare for the repair. Share on. Full list of part and tools. Author Hans Angermeier has produced over , videos showing drivers how to fix things on their cars. Top up the oil level. How to add transmission fluid. Change a flat tire. Learn where your spare tire and jack are located before you need it on the side of the road. Oil level check. See all videos for the Chevrolet Tracker. We have a massive and growing video library, but we don't have everything Asked by Wiki User. The fuse box is located on the driver's side where the dimmer switch control is. There is a brown fuse box cap that has to be removed and you will see the fuses. There are also some bigger fuses under the hood on the left when you open the hood. On the I have there is also a fuse panel under the hood. It is on the right side, just over the fender well. The AC clutch fuse is in a single small square holder to the rear and right of this other fuse panel, about 6 to 8 inches away. The larger panel will have all the high amp fuses. Question is do anyone have a picture or website of which fuse to replace for the fish finder? I cant find a diagram anywhere. Please help!!!! LT Member May 14, Fuse box holder should be under the console and easy to locate. The power cable routed to your depth finder should also have a fuse inline. It may be wired into the fuse box or battery direct. Check both places for burned fuses. If this is no help then maybe someone can help with plan B. LT said:. Replace the blown fuses. I wouldn't replace them all. Have you checked above locations? Do you see any blown? I only check below the steering consul nothing look blown to me but I'm just a green horn myself. Still my fish finder does not power up. Hammer Spank Guest May 14, Open up the rear compartment where your cranking and trolling batteries are. Attached to your cranking battery is a cable with an inline fuse. Its like a breaker that can be reset. Try that out first. Hammer Spank said:. Hammer Spank Guest May 15, I am having an electrical issue with my pro team tx as well. The bow light and front fish finder are not working. The light itself is fine and I checked all fuses and wiring that I can get to but cant find anything wrong. Im really going to hate having to take my boat to a shop for some simple connection. BriarPatch99 Senior Member May 15, Go to a local auto parts store and purchase a tester JohnK Senior Member May 15, It does not really answer the more basic question of what fuse controls what device. I know I can individually unplug items and figure this out but was hoping the information was available. Also the fact I have one 15 Amp fuse give me as little concern. Is this an original fuse? I just want to be sure. The diagram below is exactly how my fuse box I set up. Location 1 has no fuse and it appears there is no wire going to that location. Location 9 having the 15 Amp Fuse in question. Thank you again for your assistance. JoeKue Senior Member May 15, BBC Board can help you out a lot of Bass tracker experience guys over there.. Connected my old Fish finder back up and it didn't work. What did I do. JohnK Senior Member May 16, If I had to pick I would try the 3 amp, if not there then at the battery. LT Member May 16, OK, lets back up a little. What were you doing when you "saw the spark" and where did you see it? TREY said:. Reason I said I blown it because I seen a spark when I did something totally wrong Got it working!!!!!!! I found out I kept Blowing out my fuses every time I connect the lines. Billy Mallonee Banned May 19, Yeah, I still want to know what he was "doing" when he saw that spark, and where it came from You must log in or register to reply here.
